

GENI TUBE

Manufactured and Released by
MAK Magic Co., Columbus, Ohio

The Genii tube is one of the most deceptive items you will find for the production of silks, ribbons, etc.

Upon examination, you will see that the tube is made on the Phantom Tube principle, with double walls between which you can conceal a good sized load.

The tube is made in two parts with hinges and latch, so that you can open it and freely show the inside.

The loaded tube should be setting on your table, load end to the top. The tube is picked up and held so that the audience can see through it, the load side being toward you.

You then say that so they can see it better, you will show them the inside. Unlatch the tube and open it. It should be held with the load end tilted slightly toward you, the closed or bottom end slightly toward the audience.

The illusion is a perfect one. It appears as a completely empty tube. The tube is then closed, latched, and your production made.

You can, if desired, show the tube empty at various times during the production.

The Genii Tube is not just a production item. It can also be used to cause items to vanish, or to change one item into another. And it can be shown empty at any point.

The Genii Tube makes many effects possible for you. With just a little imagination you will be able to develop many different routines, making this one of the most useful items you have ever purchased.
