

THE WITCH DOCTOR'S CAN

\*\*\*\*\*

A FAST MOVING COLORFUL TRICK - - - - - ORIGINATED BY U. F. GRANT

Load the three silks into center container in the can, overlap the the ends, so as one is pulled up the next one comes to the top. The top silk to be the one that has cork, then force cork into top.

Have three medium size glass's, preferably stem wine glass's, put a couple drops of vegetable food coloring in bottom of each glass, a different color in each to match the silks, if put in the morning the drops will dry in glass's for afternoon or evening show. Then have a tall glass of water and you are set.

Pick up the can and tall glass of water saying you will mix a Witch Doctor's Potion. Pour water in and out of can a few times, then leave it in the can, pull out the cork so hand hides it as it pulls out the first silk, then same hand pulls other two silks out, bulk of three silks hides the cork as silks are put on table. Pour water out of the can into the three wine glass's and you get colors that match the silks.

~~COLOR CHANGE LIQUID EFFECT~~ - In this method you get a wine and water effect without acids and is drinkable. Use four tall glass's one with water in second one small amount of yellow, third small amount of green and last one larger amount of red. Soooo when you pour water back out of can into second glass you get yellow, then pour yellow into next glass and you get green and green into last glass and you get deep red. Take a sample drink from each as you pour it.

ANOTHER COLOR CHANGE METHOD - In bottom of fake tube a drop of green, in bottom of can proper a drop of yellow and a tall glass with a few drops of red. Let these dry. Then another tall glass of water. Pour water in can then pull silks out. Pour water back out into glass's that had water and it is yellow, pour into next glass and it is green and last glass for red.
